

Please do not allow Low Power FM stations to take priority over current FM translator service. As a listener to the K-LOVE radio network in the Phoenix area, I find that the signal comes in stronger over the translators on 89.1 and 100.9 stronger in some areas of town than does the signal on the main channel of 105.5 (as I drive around town, I often switch between the various channels depending on where I am in town.) Phoenix is a large metropolis, and the main channel broadcasts from the Casa Grande area that is about 60 miles away from the Phoenix area. Though the signal on the main channel is strong enough to reach the southern part of the metropolitan area, without the translators, most of the Phoenix metro area could not receive a strong enough signal to listen to the station.

Please permit K-LOVE to continue to use its translators without interference.
